## HMS HEAVY-DUTY ALUMINUM DOCK LADDER

HMS Heavy-duty Aluminum Dock Ladders provide a safe and convenient access in and out of the water. The ladders are a uni-welded aluminum construction. They are fabricated of Marine Grade Aluminum alloy. All steps have a non-skid surface for added safety. The ladders are easy to mount using 4 stainless steel bolts. The length of each ladder is based on the distance from the dock or bulkhead to the bottom step. (Example: 5 step ladder = 5 feet from dock to last step)
