

Hose Stems and Clamps

HOSE STEMS

FOR USE ON POTABLE WATER HOSE

The stem's purpose is to provide a companion male fitting for the female coupling described below. In addition, it provides a male threaded end for the hose to connect to a female threaded (NPT) hose end or rigid outlet. Used in place of a standard hose nipple, it fits the same hose I.D. as the NPT size of the coupling.

NPT = National Pipe Thread (also called IPT – Iron Pipe Thread)

ITEM NO.	ITEM	OVERALL LENGTH	OBRE DIAM	STEM LENGTH	WEIGHT
18-003	MS-26 Hose Stem – for hose I.D. 2"	6 7/8"	1 11/16"	3 7/8"	3 lbs. each
--	MS-36 Hose Stem – for hose I.D. 3"	9 5/16"	2 11/16"	5"	7 lbs. each

HOSE CLAMPS

FOR USE ON POTABLE WATER HOSE

The clamps are used with efficiency and safety on any fitting having a collar to engage the forward gripping "fingers" of the clamp. Dovetailing sections provide for a variation in hose outside dimensions, without pinching the hose while the clamp is being tightened. The bolt lugs are offset on the perimeter, to assure a broader, firmer grip on the circumference of the hose. Gripping ridges on the inside of each clamp section adds to the holding strength of these clamps. They can be easily attached and tightened without special tools. They are reusable.

ITEM NO.	ITEM	FOR HOSE I.D.	FOR HOSE O.D.	BOLT SIZE	WEIGHT
18-005	BU-29 Hose Clamp	2"	2 1/2" to 3 15/16"	5/8"x3"	3.1 lbs. each
18-006	BU-30 Hose Clamp	2"	3 3/32" to 3 7/16"	5/8" x 3 1/2"	7 lbs. each
18-007	BU-34 Hose Clamp	2 1/2"	3 1/2" to 3 15/16"	5/8" x 3 1/2"	7/4 lbs each
